The Upshot

BACKGROUND

I'm interested in *disagreement*...

I'm interested in *disagreement*...
...and I'm interested in *words*,
and what they mean.

Why I'm interested in the topic

In particular, I'm interested in the role that
logic and logical concepts might play
in *clarifying* and *managing* disagreement.

- ▶ *Disagreement* between rival accounts of logic

- ▶ *Disagreement* between rival accounts of logic
- ▶ *Monism* and *Pluralism* about logic

- ▶ *Disagreement* between rival accounts of logic
- ▶ *Monism* and *Pluralism* about logic
- ▶ *Ontological* relativity (\exists)

- ▶ *Disagreement* between rival accounts of logic
- ▶ *Monism* and *Pluralism* about logic
- ▶ *Ontological* relativity (\exists)
- ▶ The status of modal vocabulary (\Diamond)

Let Led Zeppelin Explain...

There's a lady who's sure all that glitters is gold
And she's buying a stairway to heaven.
When she gets there she knows, if the stores are all closed
With a word she can get what she came for.
Ooh, ooh, and she's buying a stairway to heaven.

There's a sign on the wall but she wants to be sure
'Cause you know sometimes words have two meanings.
In a tree by the brook, there's a songbird who sings,
Sometimes all of our thoughts are misgiven.

Ooh, it makes me wonder, Ooh, it makes me wonder.

There's a feeling I get when I look to the west,
And my spirit is crying for leaving.
In my thoughts I have seen rings of smoke through the trees,
And the voices of those who stand looking.

Ooh, it makes me wonder, Ooh, it really makes me wonder.

And it's whispered that soon, if we all call the tune,
Then the piper will lead us to reason.
And a new day will dawn for those who stand long,
And the forests will echo with laughter.

If there's a bustle in your hedgerow, don't be alarmed now,
It's just a spring clean for the May Queen.
Yes, there are two paths you can go by, but in the long run
There's still time to change the road you're on.
And it makes me wonder.

Your head is humming and it won't go, in case you don't know,
The piper's calling you to join him,
Dear lady, can you hear the wind blow, and did you know
Your stairway lies on the whispering wind?

And as we wind on down the road
Our shadows taller than our soul.
There walks a lady we all know
Who shines white light and wants to show
How everything still turns to gold.
And if you listen very hard
The tune will come to you at last.
When all are one and one is all
To be a rock and not to roll.

And she's buying a stairway to heaven.

Let Led Zeppelin Explain...

There's a lady who's sure all that glitters is gold
And she's buying a stairway to heaven.
When she gets there she knows, if the stores are all closed
With a word she can get what she came for.
Ooh, ooh, **and** she's buying a stairway to heaven.

There's a sign on the wall **but** she wants to be sure
'Cause you know sometimes words have two meanings.
In a tree by the brook, there's a songbird who sings,
Sometimes all of our thoughts are misgiven.

Ooh, it makes me wonder, Ooh, it makes me wonder.

There's a feeling I get when I look to the west,
And my spirit is crying for leaving.

A DEFINITION

William James, a Tree, a Squirrel and a Man

A man walks rapidly around a tree, while a squirrel moves on the tree trunk. Both face the tree at all times, but the tree trunk stays between them. A group of people are arguing over the question:

William James, a Tree, a Squirrel and a Man

A man walks rapidly around a tree, while a squirrel moves on the tree trunk. Both face the tree at all times, but the tree trunk stays between them. A group of people are arguing over the question:

Does the man go round the squirrel or not?

William James, a Tree, a Squirrel and a Man

A man walks rapidly around a tree, while a squirrel moves on the tree trunk. Both face the tree at all times, but the tree trunk stays between them. A group of people are arguing over the question:

Does the man go round the squirrel or not?

α : The man *goes round* the squirrel.

δ : The man doesn't *go round* the squirrel.

William James, a Tree, a Squirrel and a Man

Which party is right depends on what you practically mean by 'going round' the squirrel. If you mean passing from the north of him to the east, then to the south, then to the west, and then to the north of him again, obviously the man does go round him, for he occupies these successive positions. But if on the contrary you mean being first in front of him, then on the right of him then behind him, then on his left, and finally in front again, it is quite as obvious that the man fails to go round him ...

Make the distinction, and there is no occasion for any farther dispute.

— William James, Pragmatism (1907)

Resolving a dispute by clarifying meanings

α : The man *goes round*₁ the squirrel.

δ : The man doesn't *go round*₂ the squirrel.

Resolving a dispute by clarifying meanings

α : The man *goes round*₁ the squirrel.

δ : The man doesn't *go round*₂ the squirrel.

Once we *disambiguate* “going round”
no disagreement remains.

- For James, “going round₁” and “going round₂” are explicated in other terms of α and δ ’s vocabulary.

Resolution by translation

- ▶ For James, “going round₁” and “going round₂” are explicated in other terms of α and δ ’s vocabulary.
- ▶ Perhaps terms t_1 and t_2 *can’t* be explicated in terms of prior vocabulary. No matter.

Resolution by translation

- ▶ For James, “going round₁” and “going round₂” are explicated in other terms of α and δ ’s vocabulary.
- ▶ Perhaps terms t_1 and t_2 *can’t* be explicated in terms of prior vocabulary. No matter.
- ▶ α could learn t_2 while δ could learn t_1 .

What is a Translation?

What is a Translation?

$$t : L_1 \rightarrow L_2$$

What is a Translation?

$$t : L_1 \rightarrow L_2$$

- ▶ t may be INCOHERENCE PRESERVING: $X \vdash_{L_1} Y \Rightarrow t(X) \vdash_{L_2} t(Y)$.

What is a Translation?

$$t : L_1 \rightarrow L_2$$

- ▶ t may be INCOHERENCE PRESERVING: $X \vdash_{L_1} Y \Rightarrow t(X) \vdash_{L_2} t(Y)$.
- ▶ t may be COHERENCE PRESERVING: $X \not\vdash_{L_1} Y \Rightarrow t(X) \not\vdash_{L_2} t(Y)$.

What is a Translation?

$$t : L_1 \rightarrow L_2$$

- ▶ t may be INCOHERENCE PRESERVING: $X \vdash_{L_1} Y \Rightarrow t(X) \vdash_{L_2} t(Y)$.
- ▶ t may be COHERENCE PRESERVING: $X \not\vdash_{L_1} Y \Rightarrow t(X) \not\vdash_{L_2} t(Y)$.
- ▶ t may be COMPOSITIONAL (e.g., $t(A \wedge B) = \neg(\neg t(A) \vee \neg t(A))$), so $t(\lambda p.\lambda q.(p \wedge q)) = \lambda p.\lambda q.(\neg(\neg p \vee \neg q)).$

Example Translations

- ▶ $t_\alpha(\text{going round}) = \text{going round}_1$; $t_\delta(\text{going round}) = \text{going round}_2$.

Example Translations

- ▶ $t_\alpha(\text{going round}) = \text{going round}_1$; $t_\delta(\text{going round}) = \text{going round}_2$.
- ▶ $\text{dm} : L[\wedge, \vee, \neg] \rightarrow L[\vee, \neg]$, a *de Morgan* translation.
 $\text{dm}(A \wedge B) = \neg(\neg\text{dm}(A) \vee \neg\text{dm}(B))$. This is *coherence* and *incoherence preserving*, and *compositional*.

Example Translations

- ▶ $t_\alpha(\text{going round}) = \text{going round}_1$; $t_\delta(\text{going round}) = \text{going round}_2$.
- ▶ $dm : L[\wedge, \vee, \neg] \rightarrow L[\vee, \neg]$, a *de Morgan* translation.
 $dm(A \wedge B) = \neg(\neg dm(A) \vee \neg dm(B))$. This is *coherence* and *incoherence preserving*, and *compositional*.
- ▶ $s : L[0, ', +, \times] \rightarrow L[\in]$, interpreting arithmetic into set theory.

Example Translations

- ▶ $t_\alpha(\text{going round}) = \text{going round}_1$; $t_\delta(\text{going round}) = \text{going round}_2$.
- ▶ $dm : L[\wedge, \vee, \neg] \rightarrow L[\vee, \neg]$, a *de Morgan* translation.
 $dm(A \wedge B) = \neg(\neg dm(A) \vee \neg dm(B))$. This is *coherence* and *incoherence preserving*, and *compositional*.
- ▶ $s : L[0, ', +, \times] \rightarrow L[\in]$, interpreting arithmetic into set theory.

This is *compositional* and *coherence preserving*, but *not incoherence preserving* for FOL derivability. $(\forall x)(\exists y)(y = x + 1)$ is true in *all* models (whether the axioms of PA hold or not). Its translation $(\forall x \in \omega)(\exists y \in \omega)(\forall z)(z \in y \equiv (z \in x \vee z = x))$ is a ZF *theorem* but not true in all models.

Example Translations

- ▶ $t_\alpha(\text{going round}) = \text{going round}_1$; $t_\delta(\text{going round}) = \text{going round}_2$.
- ▶ $dm : L[\wedge, \vee, \neg] \rightarrow L[\vee, \neg]$, a *de Morgan* translation.
 $dm(A \wedge B) = \neg(\neg dm(A) \vee \neg dm(B))$. This is *coherence* and *incoherence preserving*, and *compositional*.
- ▶ $s : L[0, ', +, \times] \rightarrow L[\in]$, interpreting arithmetic into set theory.

This is *compositional* and *coherence preserving*, but *not incoherence preserving* for FOL derivability. $(\forall x)(\exists y)(y = x + 1)$ is true in *all* models (whether the axioms of PA hold or not). Its translation $(\forall x \in \omega)(\exists y \in \omega)(\forall z)(z \in y \equiv (z \in x \vee z = x))$ is a ZF *theorem* but not true in all models.

$\vdash (\forall x)(\exists y)(y = x + 1)$ while $\not\models t[(\forall x)(\exists y)(y = x + 1)]$.

Given a resolution by translation,
there is no disagreement over C
in the shared language L_* .

Given a resolution by translation,
there is no disagreement over C
in the shared language L_* .

The position $[t_\alpha(C) : t_\delta(C)]$ (in L_*) is coherent.

Taking Disputes to be Resolved by Translation

To *take* a dispute to be resolved by translation
is to take there to be a pair of translations
that resolves the dispute.

Taking Disputes to be Resolved by Translation

To *take* a dispute to be resolved by translation
is to take there to be a pair of translations
that resolves the dispute.

(You may not even *have* the translations in hand.)

A METHOD ...

... to resolve *any* dispute by translation.

Resolution by Disjoint Union

Or, what I like to call “the way of the undergraduate relativist.”

Resolution by Disjoint Union

$$L_{\alpha|\delta} = L_\alpha \sqcup L_\delta$$

Resolution by Disjoint Union

$$L_{\alpha|\delta} = L_\alpha \sqcup L_\delta$$

Resolution by Disjoint Union

$L_{\alpha|\delta}$ is the *disjoint union* $L_\alpha \sqcup L_\delta$,
and $t_\alpha : L_\alpha \rightarrow L_{\alpha|\delta}$, $t_\delta : L_\delta \rightarrow L_{\alpha|\delta}$
are the obvious injections.

Resolution by Disjoint Union

$L_{\alpha|\delta}$ is the *disjoint union* $L_\alpha \sqcup L_\delta$,
and $t_\alpha : L_\alpha \rightarrow L_{\alpha|\delta}$, $t_\delta : L_\delta \rightarrow L_{\alpha|\delta}$
are the obvious injections.

For coherence on $L_{\alpha|\delta}$,
 $(X_\alpha, X_\delta \vdash Y_\alpha, Y_\delta)$ iff $(X_\alpha \vdash Y_\alpha)$ or $(X_\delta \vdash Y_\delta)$.

Resolution by Disjoint Union

$L_{\alpha|\delta}$ is the *disjoint union* $L_\alpha \sqcup L_\delta$,
and $t_\alpha : L_\alpha \rightarrow L_{\alpha|\delta}$, $t_\delta : L_\delta \rightarrow L_{\alpha|\delta}$
are the obvious injections.

For coherence on $L_{\alpha|\delta}$,
 $(X_\alpha, X_\delta \vdash Y_\alpha, Y_\delta)$ iff $(X_\alpha \vdash Y_\alpha)$ or $(X_\delta \vdash Y_\delta)$.

This is a coherence relation.
The vocabularies *slide past one another*
with no interaction.

Resolution by Disjoint Union

$L_{\alpha|\delta}$ is the *disjoint union* $L_\alpha \sqcup L_\delta$,
and $t_\alpha : L_\alpha \rightarrow L_{\alpha|\delta}$, $t_\delta : L_\delta \rightarrow L_{\alpha|\delta}$
are the obvious injections.

For coherence on $L_{\alpha|\delta}$,
 $(X_\alpha, X_\delta \vdash Y_\alpha, Y_\delta)$ iff $(X_\alpha \vdash Y_\alpha)$ or $(X_\delta \vdash Y_\delta)$.

This is a coherence relation.
The vocabularies *slide past one another*
with no interaction.

This ‘translation’ is structure preserving,
and coherence and incoherence preserving too.

and $\not\vdash_{L_\delta} C$

(δ 's denial of C is coherent)

then $C \not\vdash_{L_{\alpha|\delta}} C$

(Asserting C -from- L_α and denying C -from- L_δ is coherent.)

... AND ITS COST

Nothing α says has any bearing on δ , or *vice versa*.

Losing my Conjunction

What is $A \wedge B$?

What is $A \wedge B$?

There's *no such sentence* in $L_{\alpha|\delta}$!

The Case of the Venusians

Suppose aliens land on earth speaking our languages and familiar with our cultures and tell us that for more complete communication it will be necessary that we increase our vocabulary by the addition of a 1-ary sentence connective \forall ... concerning which we should note immediately that certain restrictions to our familiar inferential practices will need to be imposed. As these Venusian logicians explain, $(\wedge E)$ will have to be curtailed. Although for purely terrestrial sentences A and B , each of A and B follows from their conjunction $A \wedge B$, it will not in general be the case that $\forall A$ follows from $\forall A \wedge B$, or that $\forall B$ follows from $A \wedge \forall B$...

— Lloyd Humberstone, *The Connectives* §4.34

Losing our Conjunction

If some statements A (from L_α) and B (from L_δ) are both *deniable* (so $\not\models A$, and $\not\models B$) then no sentence in $L_{\alpha|\delta}$ entails both A and B .

Losing our Conjunction

If some statements A (from L_α) and B (from L_δ) are both *deniable* (so $\not\vdash A$, and $\not\vdash B$) then no sentence in $L_{\alpha|\delta}$ entails both A and B .

If $C \vdash A$ and $C \vdash B$ then

Losing our Conjunction

If some statements A (from L_α) and B (from L_δ) are both *deniable* (so $\not\vdash A$, and $\not\vdash B$) then no sentence in $L_{\alpha|\delta}$ entails both A and B .

If $C \vdash A$ and $C \vdash B$ then

- ▶ if C is in L_α then $C \vdash A$ (possible) and $\not\vdash B$ (no).

Losing our Conjunction

If some statements A (from L_α) and B (from L_δ) are both *deniable* (so $\not\vdash A$, and $\not\vdash B$) then no sentence in $L_{\alpha|\delta}$ entails both A and B .

If $C \vdash A$ and $C \vdash B$ then

- ▶ if C is in L_α then $C \vdash A$ (possible) and $\not\vdash B$ (no).
- ▶ if C is in L_δ then $C \vdash B$ (possible) and $\not\vdash A$ (no).

Losing our Conjunction

If some statements A (from L_α) and B (from L_δ) are both *deniable* (so $\not\vdash A$, and $\not\vdash B$) then no sentence in $L_{\alpha|\delta}$ entails both A and B .

If $C \vdash A$ and $C \vdash B$ then

- ▶ if C is in L_α then $C \vdash A$ (possible) and $\not\vdash B$ (no).
- ▶ if C is in L_δ then $C \vdash B$ (possible) and $\not\vdash A$ (no).

So, there's *no* conjunction in $L_{\alpha|\delta}$.

PRESERVATION

Have we got conjunction in L?

Have we got conjunction in L?

We can mean *many* different things by ‘and’.

Have we got conjunction in L?

We can mean *many* different things by ‘and’.

Let’s say that ‘and’ is a *conjunction* in L iff:

Have we got conjunction in L?

We can mean *many* different things by ‘and’.

Let's say that ‘and’ is a *conjunction* in L iff:

$$\frac{X, A, B \vdash Y}{X, A \text{ and } B \vdash Y} [\text{and}\Uparrow]$$

for *all* X, Y, A and B in L.

Have we got conjunction in L?

We can mean *many* different things by ‘and’.

Let’s say that ‘and’ is a *conjunction* in L iff:

$$\frac{X, A, B \vdash Y}{X, A \text{ and } B \vdash Y} [\text{and}\uparrow]$$

for *all* X, Y, A and B in L.

(There is no conjunction in $L_{\alpha|\delta}$. There is no sentence “*A* and *B*”.)

A translation $t : L_1 \rightarrow L_2$ is **CONJUNCTION PRESERVING** if a conjunction in L_1 is translated by a conjunction in L_2 .

Preservation seems like a good idea

Translations should keep *some things* preserved.

Let's see what we can do with this.

EXAMPLES

Conjunction

Obviously, there some disagreements can resolved by a disambiguation of different senses of the word 'and.'

Conjunction

Obviously, there some disagreements can resolved by a disambiguation of different senses of the word ‘and.’

$$\text{‘and}_\alpha\text{’} \xrightarrow{t_\alpha} \text{‘}\wedge\text{’} \quad \text{‘and}_\delta\text{’} \xrightarrow{t_\delta} \text{‘and then’}$$

No Verbal Disagreement Between Two *Conjunctions*

If the following *two* conditions hold:

No Verbal Disagreement Between Two *Conjunctions*

If the following *two* conditions hold:

1. ' \wedge ' is a conjunction in L_1 and '&' is a conjunction in L_2 , and

No Verbal Disagreement Between Two *Conjunctions*

If the following *two* conditions hold:

1. ' \wedge ' is a conjunction in L_1 and ' $\&$ ' is a conjunction in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *conjunction preserving*.

No Verbal Disagreement Between Two *Conjunctions*

If the following *two* conditions hold:

1. ' \wedge ' is a conjunction in L_1 and ' $\&$ ' is a conjunction in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *conjunction preserving*.

then ' \wedge ' and ' $\&$ ' are *equivalent* in L_* .

No Verbal Disagreement Between Two *Conjunctions*

If the following *two* conditions hold:

1. ' \wedge ' is a conjunction in L_1 and ' $\&$ ' is a conjunction in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *conjunction preserving*.

then ' \wedge ' and ' $\&$ ' are *equivalent* in L_* .

That is, in L_* , $A \wedge B \vdash A \& B$ and $A \& B \vdash A \wedge B$.

No Verbal Disagreement Between Two *Conjunctions*

If the following *two* conditions hold:

1. ' \wedge ' is a conjunction in L_1 and ' $\&$ ' is a conjunction in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *conjunction preserving*.

then ' \wedge ' and ' $\&$ ' are *equivalent* in L_* .

That is, in L_* , $A \wedge B \vdash A \& B$ and $A \& B \vdash A \wedge B$.

Why?

Here's why

$$\begin{array}{c} \frac{A \& B \vdash A \& B}{A, B \vdash A \& B} [\&\uparrow] \\ \frac{A, B \vdash A \& B}{A \wedge B \vdash A \& B} [\wedge\downarrow] \end{array} \qquad \begin{array}{c} \frac{A \wedge B \vdash A \wedge B}{A, B \vdash A \wedge B} [\wedge\uparrow] \\ \frac{A, B \vdash A \wedge B}{A \& B \vdash A \wedge B} [\&\downarrow] \end{array}$$

(Since \wedge and $\&$ are both conjunctions in L_* .)

Equivalence and Verbal Disagreements

If ' \wedge ' and '&' are equivalent, then any merely verbal disagreement between $A \wedge B$ and $A' \& B'$ cannot be explained by an equivocation between ' \wedge ' and '&'.

Equivalence and Verbal Disagreements

If ' \wedge ' and '&' are equivalent, then any merely verbal disagreement between $A \wedge B$ and $A' \& B'$ cannot be explained by an equivocation between ' \wedge ' and '&'.

The only way to coherently assert $A \wedge B$ and deny $A' \& B'$ involves distinguishing A and A' or B and B' .

Equivalence and Verbal Disagreements

If '∧' and '&' are equivalent, then any merely verbal disagreement between $A \wedge B$ and $A' \& B'$ cannot be explained by an equivocation between '∧' and '&'.

The only way to coherently assert $A \wedge B$ and deny $A' \& B'$ involves distinguishing A and A' or B and B' .

$$\frac{\frac{A \vdash A' \quad \frac{\frac{B \vdash B' \quad \frac{A' \& B' \vdash A' \& B'}{A', B' \vdash A' \& B'} [\&\uparrow]}{A', B \vdash A' \& B'} [Cut]}{A, B \vdash A' \& B'} [Cut]}{A \wedge B \vdash A' \& B'} [\wedge\downarrow]$$

If A/A' and B/B' are equivalent, so are $A \wedge B$ and $A' \& B'$.

This is not surprising...

This is not surprising...

... since the rules for conjunction are *very strong*.

Negation

Consider the debate between the intuitionist and classical logician over negation.

Negation

Consider the debate between the intuitionist and classical logician over negation.

Dummett: I assert $\neg\neg p$ and deny p : $\neg\neg p \not\vdash p$.

Negation

Consider the debate between the intuitionist and classical logician over negation.

Dummett: I assert $\neg\neg p$ and deny p : $\neg\neg p \not\vdash p$.

Williamson: $\neg\neg p \vdash p$.

Negation

Consider the debate between the intuitionist and classical logician over negation.

Dummett: I assert $\neg\neg p$ and deny p : $\neg\neg p \not\vdash p$.

Williamson: $\neg\neg p \vdash p$.

Could *this* be a merely verbal disagreement?

Negation

Consider the debate between the intuitionist and classical logician over negation.

Dummett: I assert $\neg\neg p$ and deny p : $\neg\neg p \not\vdash p$.

Williamson: $\neg\neg p \vdash p$.

Could *this* be a merely verbal disagreement?

Of course! There are logics in which both intuitionist and classical ‘negation’ can be distinguished.

Negation

Consider the debate between the intuitionist and classical logician over negation.

Dummett: I assert $\neg\neg p$ and deny p : $\neg\neg p \not\vdash p$.

Williamson: $\neg\neg p \vdash p$.

Could *this* be a merely verbal disagreement?

Of course! There are logics in which both intuitionist and classical ‘negation’ can be distinguished.

Sort of.

Negation

When is something a *negation*?

Negation

When is something a *negation*?

CLASSICAL LOGIC:

$$\frac{X \vdash A, Y}{X, -A \vdash Y} [-\int]$$

Negation

When is something a *negation*?

CLASSICAL LOGIC:

$$\frac{X \vdash A, Y}{X, -A \vdash Y} [-\Downarrow]$$

INTUITIONIST LOGIC:

$$\frac{X, A \vdash}{X \vdash \neg A} [-\Downarrow]$$

Negation

When is something a *negation*?

CLASSICAL LOGIC:

$$\frac{X \vdash A, Y}{X, -A \vdash Y} [-\Downarrow]$$

INTUITIONIST LOGIC:

$$\frac{X, A \vdash}{X \vdash \neg A} [-\Downarrow]$$

Let's call something a **NEGATION** in L
if it satisfies at least the intuitionist negation rules.

Negation

When is something a *negation*?

CLASSICAL LOGIC:

$$\frac{X \vdash A, Y}{X, -A \vdash Y} [-\Downarrow]$$

INTUITIONIST LOGIC:

$$\frac{X, A \vdash}{X \vdash \neg A} [-\Downarrow]$$

Let's call something a **NEGATION** in L
if it satisfies at least the intuitionist negation rules.

And let's say that $t : L_1 \rightarrow L_2$ **PRESERVES NEGATION**
if it translates a negation in L_1 by a negation in L_2 .

No Verbal Disagreement Between Two *Negations*

If the following *two* conditions hold:

No Verbal Disagreement Between Two *Negations*

If the following *two* conditions hold:

1. ' \neg ' is a negation in L_1 and ' $-$ ' is a negation in L_2 , and

No Verbal Disagreement Between Two *Negations*

If the following *two* conditions hold:

1. ' \neg ' is a negation in L_1 and ' $-$ ' is a negation in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *negation preserving*.

No Verbal Disagreement Between Two *Negations*

If the following *two* conditions hold:

1. ' \neg ' is a negation in L_1 and ' $-$ ' is a negation in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *negation preserving*.

then ' \neg ' and ' $-$ ' are *equivalent* in L_* .

No Verbal Disagreement Between Two *Negations*

If the following *two* conditions hold:

1. ' \neg ' is a negation in L_1 and ' $-$ ' is a negation in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *negation preserving*.

then ' \neg ' and ' $-$ ' are *equivalent* in L_* .

That is, in L_* , $\neg A \vdash -A$ and $-A \vdash \neg A$.

No Verbal Disagreement Between Two *Negations*

If the following *two* conditions hold:

1. ' \neg ' is a negation in L_1 and ' $-$ ' is a negation in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$ are both *negation preserving*.

then ' \neg ' and ' $-$ ' are *equivalent* in L_* .

That is, in L_* , $\neg A \vdash -A$ and $-A \vdash \neg A$.

Why?

Collapse?

$$\begin{array}{c} \frac{-A \vdash -A}{-A, A \vdash} [-\uparrow] \\ \frac{-A, A \vdash}{-A \vdash \neg A} [-\downarrow] \end{array} \qquad \begin{array}{c} \frac{\neg A \vdash \neg A}{\neg A, A \vdash} [-\uparrow] \\ \frac{\neg A, A \vdash}{\neg A \vdash -A} [-\downarrow] \end{array}$$

It follows that any disagreement, where one asserts $\neg A$ and the other denies $-A$ (or *vice versa*) must resolve into a disagreement over A .

What options are there for disagreement?

- ▶ Disagreement over the consequence relation ' \vdash ' (*pluralism*).
- ▶ The classical logician thinks the intuitionist is mistaken to take ' \neg ' to be so weak, or the intuitionist thinks that the classical logician is mistaken to take ' \neg ' to be so strong.

Can we have merely verbal disagreement about 'exists'?

Ontological Relativity

~~Can we have merely verbal disagreement about 'exists'?~~

Can we have merely verbal disagreement about ' $(\exists x)$ '?

Ontological Relativity

~~Can we have merely verbal disagreement about 'exists'?~~

Can we have merely verbal disagreement about ' $(\exists x)$ '?

Surely!

Ontological Relativity

~~Can we have merely verbal disagreement about ‘exists’?~~

Can we have merely verbal disagreement about ‘ $(\exists x)$ ’?

Surely! Take *multi-sorted* first order logic. α says that there are numbers $((\exists x)Nx)$. δ denies it $(\neg(\exists x)Nx)$. Can we make this difference *merely verbal*? While respecting some of the semantics of $(\exists x)$?

Ontological Relativity

~~Can we have merely verbal disagreement about ‘exists’?~~

Can we have merely verbal disagreement about ‘ $(\exists x)$ ’?

Surely! Take *multi-sorted* first order logic. α says that there are numbers $((\exists x)Nx)$. δ denies it $(\neg(\exists x)Nx)$. Can we make this difference *merely verbal*? While respecting some of the semantics of $(\exists x)$?

Translate into a vocabulary with two quantifiers and two *two* domains: D_1 and D_2 with two quantifiers $(\exists_1 x)$ and $(\exists_2 x)$ ranging over each. Let N have a non-empty extension on D_1 but an empty one on D_2 . Both α and δ can happily endorse $(\exists_1 x)Nx$ and deny $(\exists_2 x)Nx$ and be done with it.

Ontological Relativity

Isn't *this* a merely verbal disagreement over what exists?

Not so fast...

Not so fast...

Perhaps there is scope for the same behaviour as with conjunction and negation.

Not so fast...

Perhaps there is scope for the same behaviour as with conjunction and negation. Consider more closely what might be involved in being an existential quantifier, and a translation preserving it.

Not so fast...

Perhaps there is scope for the same behaviour as with conjunction and negation. Consider more closely what might be involved in being an existential quantifier, and a translation preserving it.

$$\frac{X, A(v) \vdash Y}{X, (\exists x)A(x) \vdash Y} [\exists\downarrow]$$

(Where v is not free in X and Y .)

This is what it takes to be an *existential quantifier* in L .

Existential Quantifier Collapse

$$\frac{(\exists_2 x)A(x) \vdash (\exists_2 x)A(x)}{A(v) \vdash (\exists_2 x)A(x)} [\exists_2 \uparrow]$$
$$\frac{A(v) \vdash (\exists_2 x)A(x)}{(\exists_1 x)A(x) \vdash (\exists_2 x)A(x)} [\exists_1 \downarrow]$$

$$\frac{(\exists_1 x)A(x) \vdash (\exists_1 x)A(x)}{A(v) \vdash (\exists_1 x)A(x)} [\exists_1 \uparrow]$$
$$\frac{A(v) \vdash (\exists_1 x)A(x)}{(\exists_2 x)A(x) \vdash (\exists_1 x)A(x)} [\exists_2 \downarrow]$$

Existential Quantifier Collapse

$$\frac{(\exists_2 x)A(x) \vdash (\exists_2 x)A(x)}{A(v) \vdash (\exists_2 x)A(x)} [\exists_2 \uparrow] \quad \frac{(\exists_1 x)A(x) \vdash (\exists_1 x)A(x)}{A(v) \vdash (\exists_1 x)A(x)} [\exists_1 \uparrow]$$
$$\frac{A(v) \vdash (\exists_2 x)A(x)}{(\exists_1 x)A(x) \vdash (\exists_2 x)A(x)} [\exists_1 \downarrow] \quad \frac{A(v) \vdash (\exists_1 x)A(x)}{(\exists_2 x)A(x) \vdash (\exists_1 x)A(x)} [\exists_2 \downarrow]$$

If the term v appropriate to $[\exists_1 \uparrow]$ also applies in $[\exists_2 \uparrow]$,
and *vice versa*, then indeed, the two quantifiers *collapse*.

Coordination on *terms* brings coordination on $(\exists x)$

If the following *three* conditions hold:

1. $(\exists_1 x)$ is an existential quantifier in L_1 and $(\exists_2 x)$ is an existential quantifier in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$, are both *existential quantifier preserving*, and
3. In L_* , some fresh term v is *appropriate for both* $(\exists_1 x)$ and $(\exists_2 x)$

then $(\exists_1 x)$ and $(\exists_2 x)$ are *equivalent* in L_* , in that in L_* we have $(\exists_1 x)A \vdash (\exists_2 x)A$ and $(\exists_2 x)A \vdash (\exists_1 x)A$.

Coordination on *terms* brings coordination on $(\exists x)$

If the following *three* conditions hold:

1. ' $(\exists_1 x)$ ' is an existential quantifier in L_1 and ' $(\exists_2 x)$ ' is an existential quantifier in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$, are both *existential quantifier preserving*, and
3. In L_* , some fresh term v is *appropriate for both $(\exists_1 x)$ and $(\exists_2 x)$*

then $(\exists_1 x)$ and $(\exists_2 x)$ are *equivalent* in L_* , in that in L_* we have $(\exists_1 x)A \vdash (\exists_2 x)A$ and $(\exists_2 x)A \vdash (\exists_1 x)A$.

It's important to recognise what this is *not*

The appropriateness condition for eigenvariables (demonstratives, terms) is *grammatical*. It doesn't force agreement on *what exists*.

It's important to recognise what this is *not*

The appropriateness condition for eigenvariables (demonstratives, terms) is *grammatical*. It doesn't force agreement on *what exists*.

You could coherently be a *monist* and argue with someone with a more conventional ontology—with the *same* quantifiers—provided that you both took the same terms (demonstratives, eigenvariables, whatever) to be in order for that quantifier.

It's important to recognise what this is *not*

The appropriateness condition for eigenvariables (demonstratives, terms) is *grammatical*. It doesn't force agreement on *what exists*.

You could coherently be a *monist* and argue with someone with a more conventional ontology—with the *same* quantifiers—provided that you both took the same terms (demonstratives, eigenvariables, whatever) to be in order for that quantifier.

You *don't* need to take these terms to *refer* to (or range over) the same things in any substantial sense.

If the pluralist had argued instead:

- ▶ $(\exists x)(\exists y)x \neq y$, because
- ▶ $\wedge \neq \supset$, since

A *Monist* arguing with a *Pluralist* (disagreeing on terms)

If the pluralist had argued instead:

- ▶ $(\exists x)(\exists y)x \neq y$, because
- ▶ $\wedge \neq \supset$, since
- ▶ \wedge is commutative and \supset is not,

A Monist arguing with a Pluralist (disagreeing on terms)

If the pluralist had argued instead:

- ▶ $(\exists x)(\exists y)x \neq y$, because
- ▶ $\wedge \neq \supset$, since
- ▶ \wedge is commutative and \supset is not,

It's fair for the monist (or anyone else) to *agree*

A Monist arguing with a Pluralist (disagreeing on terms)

If the pluralist had argued instead:

- ▶ $(\exists x)(\exists y)x \neq y$, because
- ▶ $\wedge \neq \supset$, since
- ▶ \wedge is commutative and \supset is not,

It's fair for the monist (or anyone else) to *agree*

- ▶ \wedge is commutative, and \supset is not

A Monist arguing with a Pluralist (disagreeing on terms)

If the pluralist had argued instead:

- ▶ $(\exists x)(\exists y)x \neq y$, because
- ▶ $\wedge \neq \supset$, since
- ▶ \wedge is commutative and \supset is not,

It's fair for the monist (or anyone else) to *agree*

- ▶ \wedge is commutative, and \supset is not

But to *not* take these to be predications of the form Fa and $\neg Fb$, and so, to not be appropriate to substitute into the quantifier.

Can we have merely verbal disagreement about ‘possibility’?

~~Can we have merely verbal disagreement about ‘possibility’?~~

Can we have merely verbal disagreement about ‘ \Diamond ’?

~~Can we have merely verbal disagreement about ‘possibility’?~~

Can we have merely verbal disagreement about ‘ \Diamond ’?

Surely!

~~Can we have merely verbal disagreement about ‘possibility’?~~

Can we have merely verbal disagreement about ‘ \Diamond ’?

Surely! Take *multi-modal* logic. \Diamond_1 ranges over *possible worlds*; \Diamond_2 ranges over *times*.

~~Can we have merely verbal disagreement about ‘possibility’?~~

Can we have merely verbal disagreement about ‘ \Diamond ’?

Surely! Take *multi-modal* logic. \Diamond_1 ranges over *possible worlds*; \Diamond_2 ranges over *times*.

Isn't *this* a merely verbal disagreement over what *possible*?

Not so fast...

Let's consider more closely what might be involved in *possibility preservation*.

$$\frac{A \vdash \mid X \vdash Y \mid \Delta}{X, \Diamond A \vdash Y \mid \Delta} [\Diamond \Downarrow]$$

The separated sequents indicate positions in which assertions and denials are made in different *zones* of a discourse.

Not so fast...

Let's consider more closely what might be involved in *possibility preservation*.

$$\frac{A \vdash \mid X \vdash Y \mid \Delta}{X, \Diamond A \vdash Y \mid \Delta} [\Diamond\Downarrow]$$

The separated sequents indicate positions in which assertions and denials are made in different *zones* of a discourse.

Possibility

$$\frac{\frac{\Diamond_2 A \vdash \Diamond_2 A}{A \vdash | \vdash \Diamond_2 A} [\Diamond_2 \uparrow]}{\Diamond_1 A \vdash \Diamond_2 A} [\Diamond_1 \downarrow] \qquad \frac{\frac{\Diamond_1 A \vdash \Diamond_1 A}{A \vdash | \vdash \Diamond_1 A} [\Diamond_1 \uparrow]}{\Diamond_2 A \vdash \Diamond_1 A} [\Diamond_2 \downarrow]$$

If the *zone* appropriate to $[\Diamond_1 \Downarrow]$ also applies in $[\Diamond_2 \Downarrow]$, and *vice versa* then indeed, the two operators *collapse*.

If the following *three* conditions hold:

1. ' \Diamond_1 ' is an possibility in L_1 and ' \Diamond_2 ' is an possibility in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$, are both *possibility preserving*, and
3. In L_* , a zone is *appropriate* for \Diamond_1 iff it is appropriate for \Diamond_2

then \Diamond_1 and \Diamond_2 are *equivalent* in L_* , in that in L_* we have $\Diamond_1 A \vdash \Diamond_2 A$ and $\Diamond_2 A \vdash \Diamond_1 A$.

If the following *three* conditions hold:

1. ' \Diamond_1 ' is an possibility in L_1 and ' \Diamond_2 ' is an possibility in L_2 , and
2. $t_1 : L_1 \rightarrow L_*$, and $t_2 : L_2 \rightarrow L_*$, are both *possibility preserving*, and
3. In L_* , a zone is *appropriate* for \Diamond_1 iff it is appropriate for \Diamond_2

then \Diamond_1 and \Diamond_2 are *equivalent* in L_* , in that in L_* we have $\Diamond_1 A \vdash \Diamond_2 A$ and $\Diamond_2 A \vdash \Diamond_1 A$.

It's important to recognise what *this* is not

The appropriateness condition for zones is *dialogical*. It doesn't force agreement on *what is possible*.

It's important to recognise what *this* is not

The appropriateness condition for zones is *dialogical*. It doesn't force agreement on *what is possible*.

You could coherently be a *modal fatalist* and argue with someone with a more conventional modal views—with the *same* modal operators, provided that you both took the same zones to be in order.

It's important to recognise what *this* is not

The appropriateness condition for zones is *dialogical*. It doesn't force agreement on *what is possible*.

You could coherently be a *modal fatalist* and argue with someone with a more conventional modal views—with the *same* modal operators, provided that you both took the same zones to be in order.

(You don't need to take the same things to *hold* in each zone.)

THE UPSHOT

Upshot #1: The Power of Keeping Some Things Fixed

The more you want from a translation,
the fewer translations you have,
and the fewer ways there are
to settle disputes as merely verbal.

Upshot #1: The Power of Keeping Some Things Fixed

The more you want from a translation,
the fewer translations you have,
and the fewer ways there are
to settle disputes as merely verbal.

And the more chance you have to *locate* that dispute
in some particular part of your vocabulary.

Upshot #2: Defining Rules Provide Fixed Points

It's one thing to think of a logical concept as something satisfying a set of *axioms*.

Upshot #2: Defining Rules Provide Fixed Points

It's one thing to think of a logical concept as something satisfying a set of *axioms*.

But that is *cheap*. Defining rules are *more powerful*.

And defining rules are natural, given the conception of logical constants as topic neutral, and definable in general terms.

Upshot #3: Generality Comes in Degrees

1. Propositional connectives: *sequents alone*.
2. Modals: *hypersequents*.
3. Quantifiers: *predicate structure*.

Upshot #3: Generality Comes in Degrees

1. Propositional connectives: *sequents alone*.
2. Modals: *hypersequents*.
3. Quantifiers: *predicate structure*.

Using this structure to define the behaviour of a logical concepts allows for them to be preserved in translation and used as a fixed point in the midst of disagreement.

THANK YOU!
